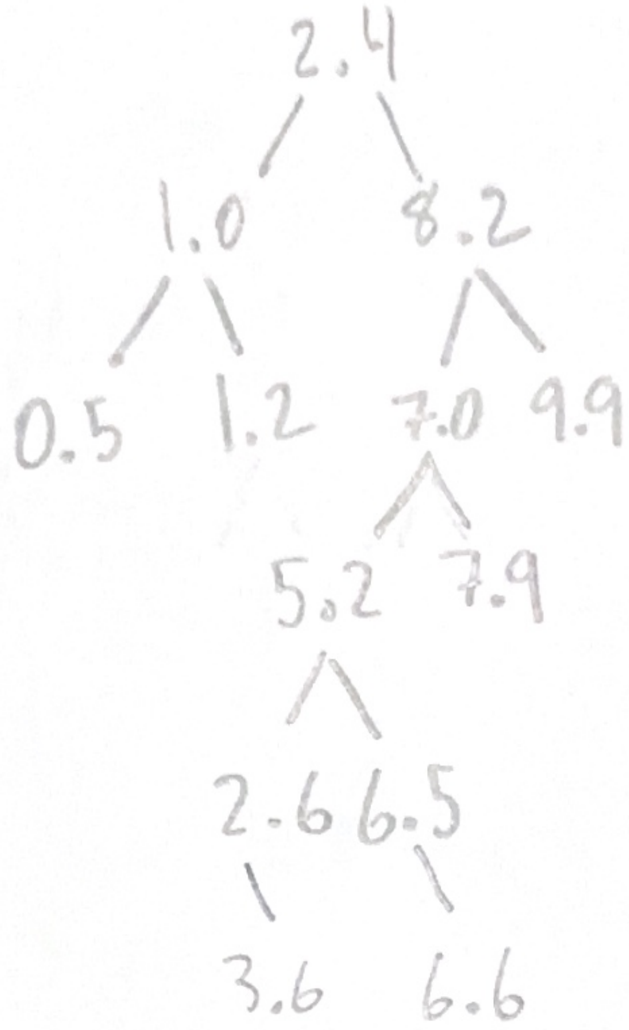
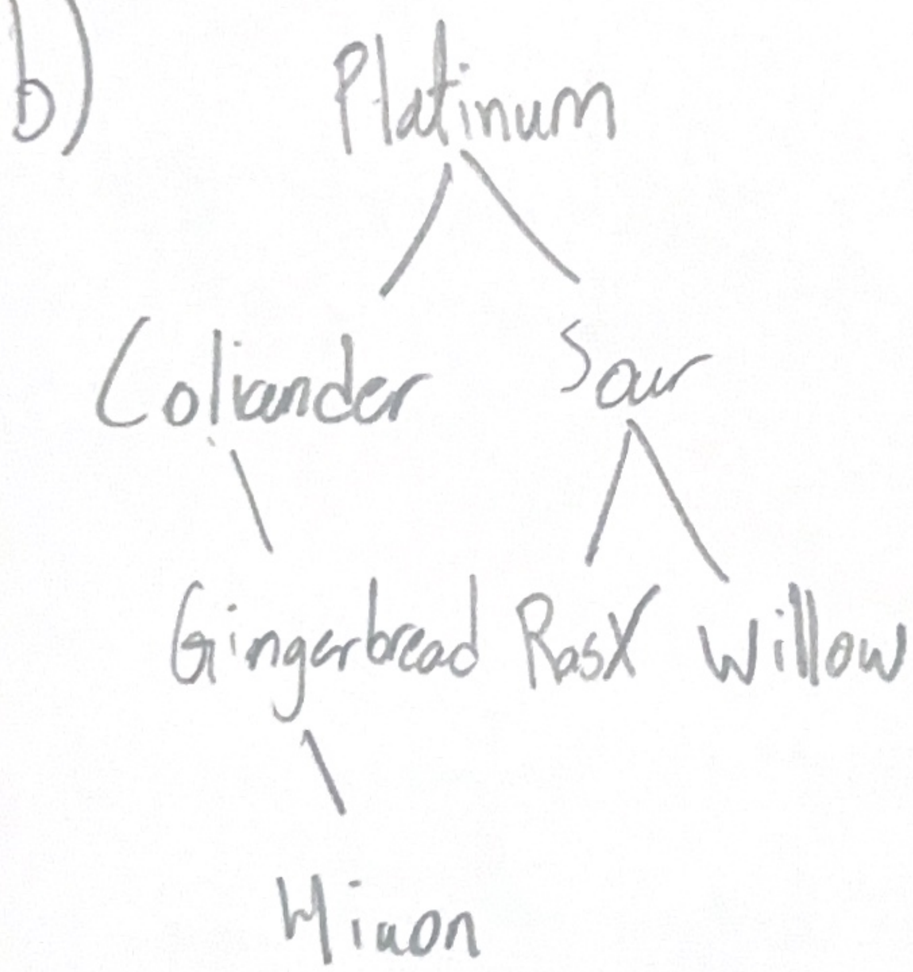
Question 1:

a) [2.4, 8.2, 7.0, 5.2, 1.0, 6.5, 2.6, 3.6, 7.9, 0.5, 6.6, 9.9, 1.2]

height = 5



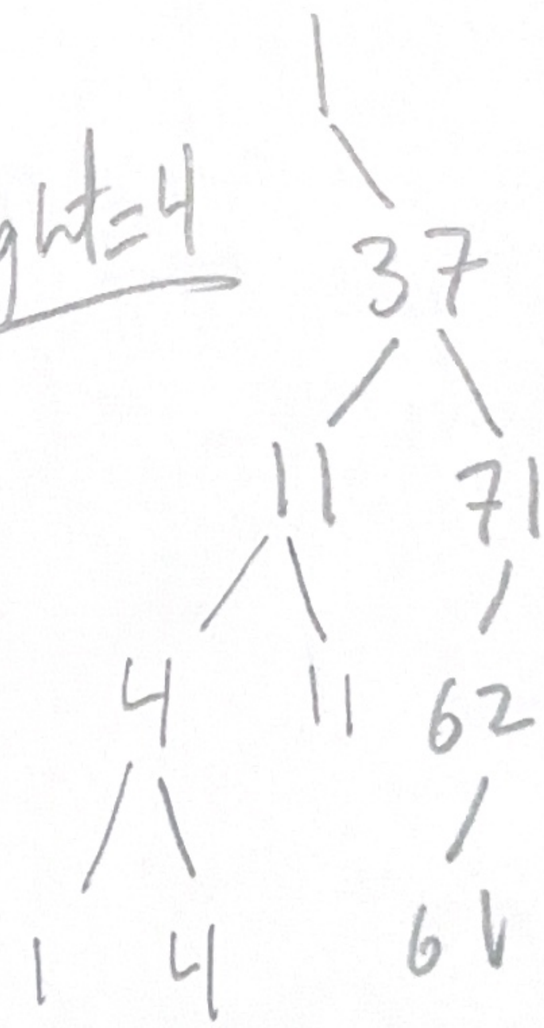
b)



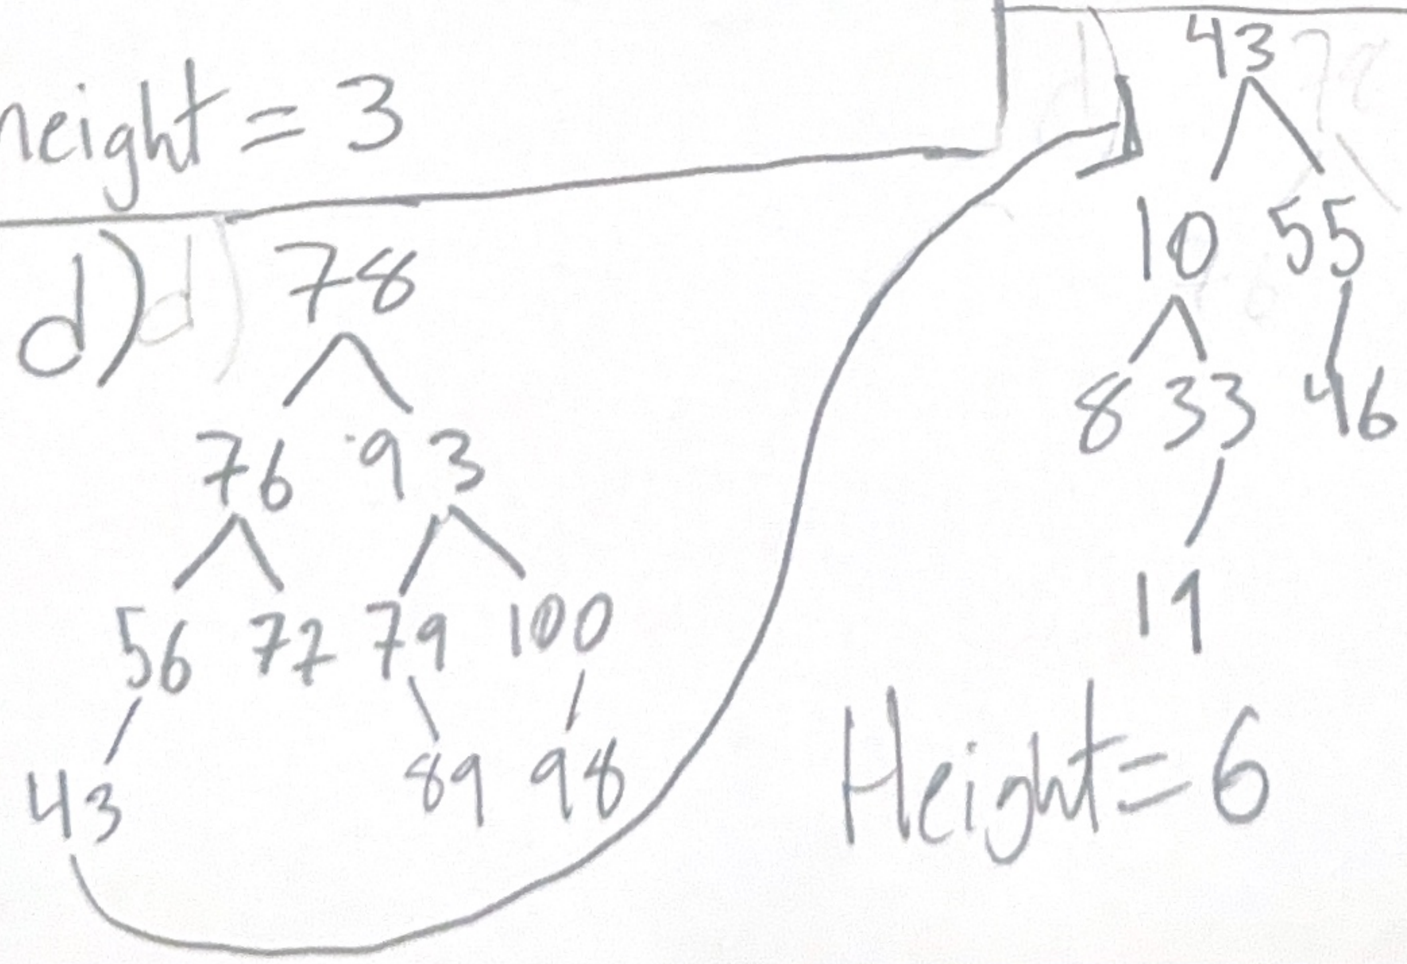
height = 3

c)

height = 4



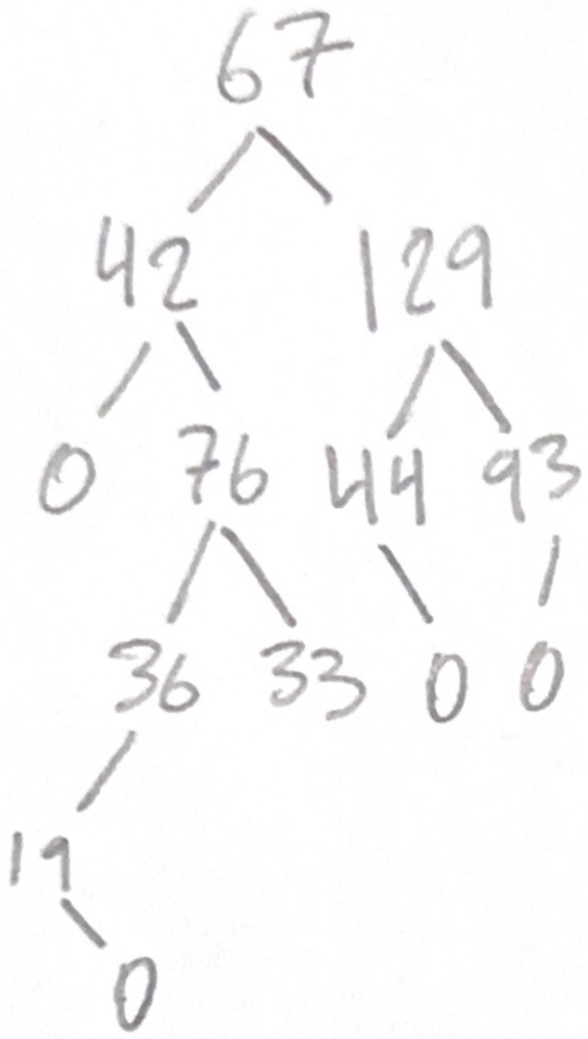
d)



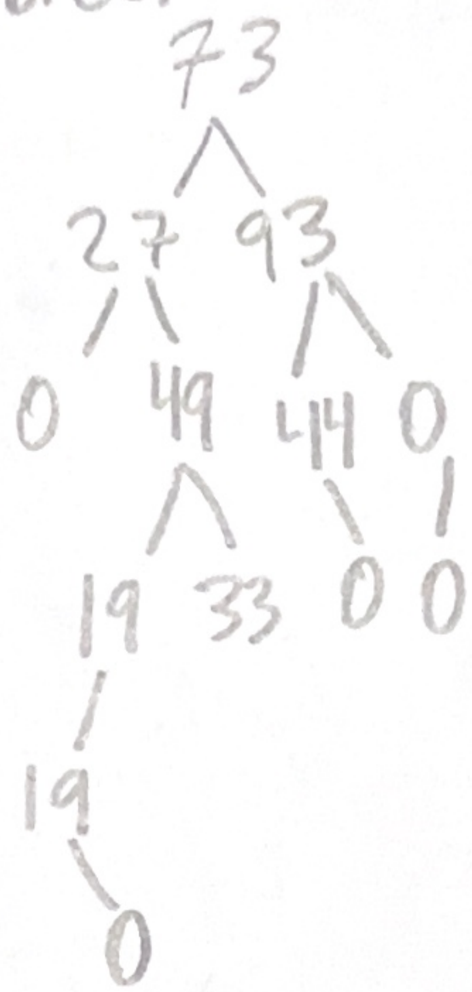
Height = 6

Question 2:

Preorder:



Inorder:



a) No, neither result is a BST.
This is b/c the trees contain 0's which violate BST rules.
And, both trees do not maintain BST ordering in the left subtree.

b) No, neither is an AVL.
This is b/c the shape doesn't change and only values change.
And, the original tree is not AVL-balanced and even after traversal, they are still not balanced.
